Dr. Jerzy Brahms
Department of Biochemistry
University of Alberta Medical School
Edmonton, Alberta
Canada

Dear Dr. Brahms:

Your note in the Journal of Molecular Biology 5: 132 (1962) on 'Molecular and Enzymatic Studies of Cardiac Myosin' was of some interest to me although far removed from my laboratory interests. I visited Japan recently, and there met Dr. Y. Ogawa at the National Institute of Genetics, (Yata IIII, Sizuoka-Ken, Misima, Japan) who referred to some older work of his on the immunological differentiation of cardiac and skeletal myosin. I urged him to publish this finding more prominently than he had (passim, in Japanese); in any case I hope I am doing no disservice now by bringing him and his work to your attention.

Sincerely yours,

Joshua Lederberg
Professor of Genetics
